HepaVision: Intelligent Liver Tumor Detection from CT Images using Deep Learning and Image Processing

Analysis Date: 25 Oct 2026, 11:17
Session ID: 0f456c3ddc3b

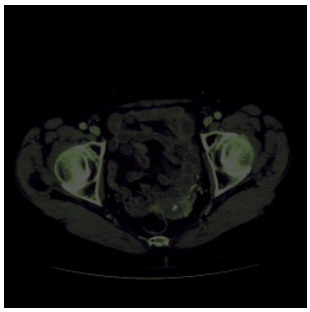

Diagnostic Summary

Metric	Value
Tumor Status	No Tumor Detected
Liver Pixels	0
Tumor Pixels	0
Tumor Burden (%)	0.0 %
Number of Lesions	0
Segmentation Status	Completed
Processing Time	3.1 s
Model Version	Liver U-Net v1.0 / Tumor U-Net v1.0

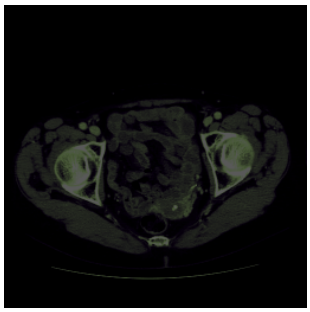

Imaging

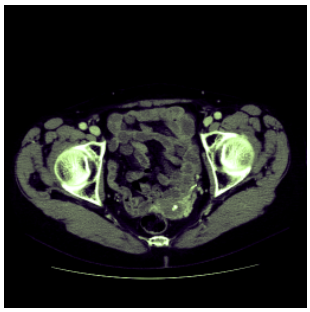

Original CT

Liver Segmentation

Tumor Segmentation

Overlay Result

This report is generated by the HepaVision research prototype developed for educational and research purposes.

The analysis is performed using Deep Learning and Image Processing techniques for liver tumor detection, liver segmentation, tumor segmentation, and visualization from abdominal CT images.

The generated results are intended for research demonstrations and engineering applications only.

This software should not be considered a substitute for professional medical diagnosis or clinical decision-making.
